*Cœlestiall Observations :*

OR AN

EPHEMERIS

OF THE

Motions of the *Sun, Moon* and *Planets*,  
(after a new and easie method) their vari-  
ous Aspects, Conjunctions and Configurations.

With many Necessary TABLES  
and OBSERVATIONS :

Both *Astronomically, Astrologically, and Meteorologically*  
Wherein may bee observed the probable  
state & condition of the year of our Redemption

1653.

Being the first after Bissextile, or Leap-yeare :

*Et a Creatione Mundi Kepleriana, 5646.*

Calculated for the Meridian of London.

Whose  $\left\{ \begin{array}{l} \text{Latitude} \\ \text{Longitude} \end{array} \right\}$  is  $\left\{ \begin{array}{l} 51 \\ 24 \end{array} \right\}$  Deg.  $\left\{ \begin{array}{l} 32 \\ 45 \end{array} \right\}$  Minutes,

By JOHN BOOKER, Student in Astrology & Physick

*Astra a Deo sunt creata, Deus nihil frustra facit;  
Igitur, astra corpora tam insignia, tam ingentia,  
tanto numero, tanta constantia ducta, quis  
dixerit eum creasse frustra?*

*Ne S Can Da Li ze M Inl, John chap. 16. vers. 1.*

The glorious planet Venus is our bright Morning Star, and so continueth to the 26 day of June, and at that time she becometh occidientall, or our resplendent Evening Star, and so appeareth to the 16 of April, 1654. At which time she is again our bright Morning Star: and that year 1654. she is upon the 26 of June in her greatest orientall distance from the Sunne. viz. 45 degrees and a halfe: she is with Jupiter this year, 1653. on the 15 of February, and the Moon very neer but under them. The 15 of May she passeth by the seven stars, with the Moon in opposition to Mars

A Table whereby may bee known what Moone  
makes a full sea, or high water in these places and parts adja-  
cent, being 124. in numb.

If you would know any time this year, 1653, when it will be full sea or high water at any the said places, or parts adjoyning, and what Moon makes the same; First, find your place in this second Table, on the left hand thereof is the point of the compasse, making the full sea or high water there; and in the common angle over against the said place on the right hand is set down hours and Minutes, which must bee alwaies added to the Ho. and Min. of the Moons coming to South, both which joyned together shew the time of high water in the said place: Yet you must remember that in all the increase of the Moon she cometh to the South after the Sun, but in the decrease before the Sun: And if the two numbers before joyned together exceed 12 hours, the 12 ho. must be subtracted and the remainder is the ho. and min. of high water, the day proposed in the place propounded. It is true, some small difference may now and then happen by reason of Land-floods, Great winds, and the forcible Aspects of the Planets: But is as neer truth as may possibly be supputed; And none but the *Bardist* or *Quibber manus sub pallio* will find fault. **EXAMPLE.**

It is desired to be known when it wil be high water at *London-bridge* on the first of *January* this year, and what Moon makes it so there: I look in the second Table, and find *London* joyned with *Tinmouth, Hartlepool, Whitby, Amsterdam, Gascow, Britain, Calizta*, and there alwaies a South-West or North-East Moon makes high water there; and on the right hand over against those places, I find 3 ho. 00. min. which I add to the Moons coming to the South the said first of Jan. at 10 of the clock 25 min. at ni. both added together, make 13 ho. 25 min. out of which subtracting 12 ho. there is left 1 ho. 25. min. i. e. it is high water at 1 a clock 25 min. in the morn. the next day in the said place, and then the Moon is South West. *Et sic in ceteris.*

To know the time of the night by the Southing of the Moon.

Here is some difficulty in the finding the ho. of the ni. by the Moon proceeding from her unequal motion; For when she is in Apogæo or highest part of her orb, she is said to move slowly, viz. in 24 ho. 11 degr. 37 min. 10 second; and then continueth in a sign about 64 hours; in her mean motion she moveth in 24 ho. 13 degr. 10 min. 36 seconds, and continueth then in a sign almost 55 ho. And lastly, when she is in Perigæo, or lowest part of her orb, she is said to move wifely viz. 15 deg. 19 min. & 50 seconds in 24 ho. continuing little more then 47 ho. in a sign, Another difficulty is in some few min. the Moon doth gain or lose from the Sun by reason of her Latitude; which may be of times 6 or 7 min. Now therefore if you would know the ho. of the ni. by the Moon, observe her shadow upon a sun diall, & if it be past the 12 ho. line, add thereto the Moons Southing, and the aggregate is the ho. of the ni. But what ho. & min. the shadow wants of the said 12 ho. line, subtract from 12 Southing & the remainder is the ho. of the ni. yet you must remember that for so many half ho. as the shadow is past the line of 12, you must subtract for so many min. But for so many half ho. as the shadow wants of the line of 12, you must add so many min. By which means (if your Diall be truly posited) you will have the very ho. and min. of the night.

# A General and perpetuall Table for Hourly motions of the Sun, Moon, and Planets.

The use of this Table.  
You must understand that the  
Places of the Planets are  
calculated for the Noon time of

Diurnal One  
Motion Houres  
24 Hour motion.

Grad. O.M. S  
Min. M.S. 3  
Sec. S. 3 4

4	0	10	0
5	0	12	30
6	0	15	0
7	0	17	30
8	0	20	0
9	0	22	30
10	0	25	0
20	0	50	0
30	1	15	0
40	1	40	0
50	2	5	0
60	2	30	0

every day, commonly called 12 a clock at noon.  
But more properly it is the begin. of the Astro-  
nomical day. If therefore you would know the  
daily motion of the Sun, Moon, or other Plan. &  
so consequently the hourly mo you may but sub-  
tract the deg & min. of the preceding day from  
the following, in Plan. direct, or contrariwise in  
those that are retrograde, and the work is done.  
You must know that there is 12 signes every sig.  
hath 30 deg & every deg. 60 min. & every min.  
60 sec. & if you resolve a sign or 30 deg. into mi.  
it wilbe 1800. A Table of which resolution & the  
use thereof shal follow: Now take an Example of  
D mo. in this first Table. Upon 5 Jan this year  
is at noon in 16 deg. 52 min. of  $\mathcal{N}$ . & the 6 day  
Aie is in 29 de. 15 mi. of the same sig. substra $\mathcal{A}$  6  
being made, her diurnal mo. wilbe 12 deg. 23 mi.  
& her hourly mo by this Tab wilbe 30 mi. 37 se.  
30 th. which being added ~~more Astronom.~~ her true  
pla. may be found for any ho. after no. As for ex-  
ample the 6 Jan. at halt an ho past 3 in morn. I  
would know y place; I found her at no. the 5 day  
in 16 deg 52 min. of  $\mathcal{N}$ , & her hourly mo to be  
30 mi. 37 se. 30 th. therefore in 15 h. & half wilbe  
8 deg. her mo. to which adding 16 deg. 52 min.  
D true pl. is in 24 de. 52 ni of  $\mathcal{N}$ , at that ho. & m.

## A Table of Degrees rel- ved into Min. & of Min. reduced into Deg. &c.

Degr.	Min.
1	60
2	120
3	180
4	240
5	300
6	360
7	420
8	480
9	540
10	600
20	1200
30	1800

You must understand that there are  
12 signs in the Zodiack, every of  
which hath 30 degr. and every degr.  
hath 60 min. so that if you shall find  
a Plan. in 60 mi. of  $\mathcal{V}$  or any other  
sign, you may say he is in the first deg.  
thercof & if in 120 min. then he is in  
the sec. deg. & if in 180 min. then he  
is in the sec. deg 30 mi. of that sign.  
And if a Pl. n be in the 29 deg 39 m.  
of a sign then you shal fin thin to be  
in the 1779 min. of that sign: As for  
example, the 1 of Jan. I find  $\odot$  to  
be in 1313 min. of  $\mathcal{V}$  whi h being  
reduced makes 21 degr. 53 mi. of  $\mathcal{V}$ .  
For in this Table 1200 mi. makes 20  
degr. 60 min. makes 1 deg & the 53 m.  
remaining make 21 d 53 m. as before

# A Table of Day-break, & Twy-light, Sun-rising and Sun-setting, Length of Day, Length of Night, and the Length of the Planetary hours for every 10 day & night throughout the year, fitted to the Latitude of 51 degrees, &c.

YEAR.	1653.	D <small>ATES</small> .	B <small>rea</small> k of Day.		T <small>wy</small> -light.		Sun-Ris.		Sun-Sett.		L <small>eng</small> th of Day.		L <small>eng</small> th of Night.		L <small>eng</small> th of Plan. h. by Day.		L <small>eng</small> th of Plan. h. by night.

	20	6	50	5	6	5	0	3	8	0	16	0	0	0	40	1	26	

You may observe that the break of day & Twy-light being added together will alwaies make 12 ho. So will also the Sun ris and sett. But if you wil add the length of day & ni. together they wil produce 24 h. So the Planetary ho. being added together will ever make 2 h. For a Planetary h. is alwaies the 12 part of the d or ni, of what length soever it be. And a d. natural is 24 ho. day & ni. from noon to noon Astronomically. 60 Min. is an ho. 45 is three quarters, &c.

1653

January hath XXXI dayes.

At Full Moon 7<sup>th</sup> and Phabus joyne, At 24<sup>th</sup>,  
 Saturne affronts Sol: Judge what may ensue,  
 When potent Advers, ranting, beareth sway,  
 To clear the Passage, levells all the way:  
 Thus hee that gives a weapon to his stronger,  
 Is like himself to carry rule no longer.

# 1653 February hath XXVIII dayes.

Now Ioue and Hermes joyn to raise high winds.  
 Cronos opposing, much afflicts our minde;  
 When great mishaps our errors do assault,  
 Then they more easie make us see our fault:  
 Complain not of misfortunes to thy Fee,  
 For he will triumph when he sees thy woe.

 28  $\delta$  h 6 m.  $\delta$  17 m. obscure dark tempest  
 Charm a Common wealth

Let Fools rayl on, let the illiterate bark  
 At Luna now eclips'd, and wholly dark:  
 The long both will be muz'd, though mislead  
 By their own Fancies, and awry now tread:  
 The effects inflict, and gaul the Gall & parts,  
 And Forain places; Cheer up English hearts.

## April hath XXX dayes

There's no Estate can stable stand for aye,  
 Yea every pleasure hath its ending day;  
 The sweets wee with for, turn to bitter, flowers  
 Even in a moment, clouds may turn to showers:  
 There is a mixture in each Common-weale;  
 Now fair, now foul, calms, storms, now rain, now haile.

1653

May hath XXXI dayes.

The Sun now transites by the Pleiades.  
 And Mars opposing will not all men please:  
 Besides Sol's waiting maid is angry too,  
 Makes Mars retire, thee will not with him woo:  
 So in our Friendship is this difference tride,  
 True Friends stand fast, when as the feigned slide.

June hath XXX daies.

Mars stands amaz'd, and frowns on Fulgent Jove,  
 The Sun with Pollux, and the Queen of Love  
 With Procyon, rise set, culminate; yet agree  
 To crown the earth with fruit, our hearts with glee.  
 Thus showres of rain doe cause the earths encrease,  
 As streames of teares, doe bring the soule true peace.

## Moons aspects to Planets.

## Planets mutual aspects

Full Moon at 2.58 morn fair and  
 pleasant weather begins the month  
 \*  $\text{d}5\text{m}$  & hollow fresh gales of wind  
 $\Delta\text{v}4\text{n}$   $\text{d}h10$  except 4 at night  
 $\Delta\text{v}10\text{b}$   $\text{d}11\text{b}$   $\Delta\text{d}2\text{a}$  As greatest  
 $\Delta\text{d}1\text{m}$   $\text{d}10\text{n}$  calmes doe turn to  
 $\Delta\text{d}4\text{a}$   $\text{d}12\text{n}$  thunder claps. So  
 2nd quarter at 3.31 before sweetest  
 \*  $\text{d}5\text{m}$   $\Delta\text{h}8\text{b}$  \*  $\text{v}7\text{a}$  hopes oft turn  
 \*  $\text{d}7\text{b}$  \*  $\text{d}4\text{a}$  to lowrest haps. Dark  
 $\text{d}h1\text{b}$   $\text{d}v\text{d}9\text{n}$  thunder & light-  
 ning, and in some places harms thereby,  
 Noon. \*  $\text{h}1\text{a}$   $\Delta\text{v}10\text{n}$  especially  
 $\text{d}9\text{n}$  northeast & northwest, rain at  
 New Moon 1.56 m. Asc. 12 II. night  
 $\Delta\text{d}1\text{m}$  faire temperate pleasant  
 $\text{d}h9\text{n}$  cloudy threatening weather  
 \*  $\text{d}2\text{m}$   $\text{d}v6\text{m}$   $\text{d}7\text{m}$  Windes clear  
 \*  $\text{d}8\text{n}$  \*  $\text{d}12\text{n}$  the ayre, and cause  
 \*  $\text{d}5\text{a}$   $\text{d}7\text{a}$  an Azur'd sky. Let  
 men rejoyce, & God be praised on high.  
 1st quarter at 5.2 aftern \*  $\text{h}7\text{a}$   
 $\text{d}1\text{m}$   $\Delta\text{v}3\text{m}$   $\Delta\text{d}3\text{a}$  We may  
 expect some shoures about Midsomer.  
 $\text{d}8\text{b}$   $\Delta\text{d}10\text{b}$   $\text{d}3\text{a}$   $\text{d}8\text{n}$  As  
 Gentle shoures do cause the Fruits to  
 $\Delta\text{h}8\text{n}$  grow, so peace at length we  
 \*  $\text{v}1\text{m}$  we hope will cure our woe.  
 $\text{d}8\text{b}$  Thunder may come to places some  
 Full Moon at 3.0 aftern \*  $\text{d}8\text{b}$  5a

July hath XXXI daies.

Sad are the sights, bitter the fruits of Warre,  
 Whe: Swords must mend what insolence did marre,  
 Tow'r topping Rome, now sea as shee must decline,  
 Her glory is departing: Shee doth shine  
 But dimly, ere few yeeres we shall have prooffe  
 That shee'l exdure like a thinking snuffe.

August hath XXXI daies.

New ply your Harvest, gather in your Corne,  
 To learn of Pismires, wise men will not scorne,  
 If things irrationall so prudent be,  
 Learn man what duty doth belong to thee.  
 Know! after wit, is like a shower of rain  
 That falls untimely on the ripened grain.

# 1653. September hath XXX daies.

When Heaven yields means, they must not be neglect,  
Ingratitude deserves to be correct.

A pleasant season do the Stars bestow,  
Man must therefore repay (for he doth owe)  
Due thanks to God. Tis now a second Spring,  
Let men, and all things else Gods praises sing.

October hath XXXI daies.

Age is chill, cold, and full of doubts and teares  
 Young Venus frowns makes Saturn shed some teares  
 Thus foure beauties may deserve some blame  
 If company may blatt a good mans name,  
 And open bladders oftentimes doe bring  
 That to effect, when there was no such thing.

*Hermes and Sol with Saturn in debate,  
Mars joynts with Jupiter to change the State  
Of humane things: Were it a time of action  
Much harm might come, rais'd by a fiery faction,  
But royall Sol projects his friendly rayes,  
And clears those mists, which else might much displease.*

1653. December hath XXXI daies.

I like not *Luna's* square in that condition,  
 When *Mars* & *Saturn* are in Opposition,  
 If *Jupiter* and *Venus* do betwixt not,  
 And in our sad Affliction, comforts lend not.  
 The yet stars at a period, would 't were good;  
 That men's ill period, shall be ipar'd to spill more blood.

Humanasque Vices, Calum, Stellaque Volantes,  
Ordine perperus possis servare mecum.

# BOOKER. 1653.

## To the Reader.

**T**Here is nothing in this world which may not be corrupted, nor any kind of Learning but it may be abused, yea, all the seven Liberall Sciences (*Encyclopædia*) are as all things else subject to errors, mutation and change. Our Bodies when they fall into any discredits and infirmities, are they therefore to be neglected, and suffered to languish and utterly perish? Nay rather but to be recured, recruited, preserved and cherished: Even so ought it to be with Sciences, Arts and Knowledges; though there be in them some abuses and seeming cont. adictions, and failings in the *Artists* (*for humanum est errare*) Arts must not therefore be neglected, derided, contemned and scorned, but rather further enquired into, rectified and amended, and the *Artists* better informed. It is true, in all Ages Arts and Sciences, as they have had their Inventors, Advancers, Correctors, Amenders, yet never any Age was free from Errors and enormities; but alwayes, as Covetousnesse, Ambition, Vain glory, Self-ends and interests encreased, so abuses crept in; by which means Truth was never free from enemies and opposers.

Some yeers agoe *Henricus Cornelius Agrippa*, *Scripsit de Vanitate Scientiarum*, in quo præter Argumenti nequitiam, ostendit etiam suam ignorantiam dum tractat quæ nescit, placet tamen multis, ut *Asinis paleæ*. He exclaimed against all Arts, Sciences, Professions, &c. but I conceive his intent was not utterly to obliterate their worthinesse and excellencies, but to reprove and discover their evil uses, and to shew the acutenesse of his own wit in disproving them, for a tryall of his Learning; and indeed he was a very learned man. Yet as *Hieronymus Cardanus*

Cardanus sayes of him as he was, *Vir ingeniosus & studiis deditus*, so he was *Variis, mutabilis, mendax, subdolis, & habuit comitatem, & a banitatem*; usque ad scurrilitatem; and shewes good Astrological reasons for it too. Cardanus, de Genituris 67. He wrote against Grammer, Poetry, Historiography, Rhetorick, Logick, Musick, Arithmetick, Geometry, Natural and Morall Philosophy, Kingly Government, Nobility, Gentry, Politick Government, House-keeping, Husbandry, Merchandizing, Physick, the Art of the Apothecary, Surgery, Lawes and Statutes; Divinity both Scholasticall, Interpretative and Prophetical, Astronomy, Astrologie, &c. and in conclusion, he makes a digression in praise of the Ass. *Inter Philosophos videt omnia Democritus, conera deslet cuncta Heraclius, & seire se putat omnia Aristoteles: contemnit cunctas Diogenes: nullis hic parcat Agrippa: contemnit, scit, nescit, flet, ridet, irascitur, insectatur, carpit omnia.* Since his time many (though otherwise) very learned men, have inveighed bitterly, especially against the Mathematicks, Astronomy, Astrologie, &c. I shall name none of them, nor rail at the persons of any men, but will advise all sober, learned men to save their labour in reading such Treatises, for there is no end of them; and it is a wearinesse to the flesh: What filthy, base and scurrilous, ridiculous, lying language and expressions have dropped from the pens of Phreneticus, Democritus; and other frothy wits, Poets and Ballad-makers of late dayes; and yet these were the learned Authors with which a well-known person made choice of to censure Astrologie in a publick place; within few dayes after the Eclipse of the Sun in March last; which in no wise hath eclipsed the credit of the Art of Astrologie, or the Astrologers, neither will they be accounted for Lyars; for though that day was not so dark and gloomy as some ignorants expected, and so understood it would have been, yet the Eclipse was as great, and as neer the time it was predicted as Astro-  
nomicall

## A Prognostication.

nomickall Calculation could compute and discover: And  
 I beleeve the effects and portents will prove to be as dis-  
 mall, black and terrible as *Astrology* hath foretold and  
 premonstrated; which I pray God of his mercy that we  
 of this Common-wealth of England, and our Neighbour  
 Nations (if not begun already) be not within few moneths  
 sadly sensible of, though *Anti-Mag-Astro-mancers*, and  
 all other ignorant and erroneous *Anti-Astrologers*, with  
 all their posings and puzzlings, be in contrary and oppo-  
 site Opinions; all their vain Arrowes stolen out of  
*Agrippa's* Quiver, *Picus* Earl of *Mirandula*, the Earl  
 of *Northampton's* Defensive, *Carltons* Astrologomania,  
*Chambers*, *Vicars*, *Gerce*, *Ram*, *Rowland* and his Second,  
 and the rest, with which they endeavoured to gall and  
 wound the Credit of *Astrology*, will prove like shafts  
 shot into the Ayre, and may perchance light on their  
 own heads; or like him that spits against Heaven,  
 which may fall in his own face. I shall not my self,  
 (neither would I wish any man else) further to trouble  
 himself at the writings of such kind of men, who as much  
 as in them lyes would deprive us of the most usefull  
 and most excellent of all humane Learning. I shall  
 leave them to be dealt withall, as *Agrippa* layes of him-  
 self, in his Epistle to the Reader, in that Book of  
 his *De Vanitate Scientiarum*; part of which the Au-  
 thor of *Pus Mantia* here and there hath inserted in  
 the end of his 26. Chapter, and the most part of  
 his Book is collected and taken out of that. Neither  
 will I trouble my self to answer the *How's*, *Why's*, *What's*,  
*Whethers* and *wherefores* the Author of that *Pus Mantia*  
 hath stufte his posing and puzzling Collections with-  
 all; for I know any thing may be either questioned or con-  
 tradicted by such as are ignorant, wilfull, or have  
 an affectation of singularity: I leave all men to judge  
 whether it be not ignorance, or rather envy, to joyn  
*Astrology* or *Astromancy*, in affinity with *Witchcraft* and  
*Necromancy*

BOOKER. 1653.

*Necromancy*, and I know not how many *Mancies* more, at the least fifty which he hath heapt together in his nineteenth Chapter : But I forbear to rub the gal'd Horse back ; *Et sic conclusum, & actum est contra Anti-Mag-Astrologos.*

---

Eccles. chap. 3. vers. 1, 4, 8.

To every thing there is a Season, and a Time to every purpose under Heaven ; a Time to weep, and a Time to laugh ; a Time to mourn, and a Time to dance ; a Time to love, and a Time to hate ; a Time of war, and a Time of peace.

Eccles. chap. 9. vers. 12.

I returned and saw under the Sun, that the race is not yet to the swift, nor the battell yet to the strong, neither yet bread to the wise, nor yet riches to men of understanding, nor yet favour to men of skill, but Time and Chance happeneth to them all.

Esther 8. 17, &c.

The Jewes had joy and gladnesse, a Feast and A Good Day.

Prov. 22. 3. & 27. 12.

A prudent man foreseeth the Evill, and hideth himself ; but the simple passe on, and are punished.

Eccles. 12. 1.

Remember now thy Creator in the dayes of thy youth, while the Evill Dayes come not, &c.

J A N U.

## *A Prognostication.*

### JANUARY.

#### *Good Dayes.*

1. 2. **W**ELL begun is half way through.
5. Kissing goes by favour.
6. Have at all.
8. He must needs swim that is held up by the chin
9. It's never bad day that hath a good night.
10. Good Ware makes quick Markers.
14. As safe as a Mouse in a Malt heap.
15. He fares well of other mens cost.
16. A good Housewife is a jewel.
17. A hook well lost to catch a Salmon.
20. As glad as fowl of a fair day.
21. Not onely, but also.
- 22, 23. After storm comes a calm
26. Many a foul morning hath a fair day.
- 27, 28. None of the worst.
30. Good counsell does no harm.

#### *Evil Dayes.*

3. **L**ook not too high, least a chip fall in your eye.
4. Miserable carelesse.
7. Women be Wasps, if angered.
11. As good never a whit, as never the better.
12. The older the worse, like my old shooes.
13. He payes him with pen-powder.
18. They cannot set their horses i'th same stable.
19. Like ill weather Sorrow comes unsent for.
24. Agree, for the Law is costly.
25. 'Tis a bad Cause that none dare speak in.
29. By scratching and biting, Dogs and Cats goe together by the cars.
31. He will goe to Law for your wagging of a straw.

### FEBRUARY.

#### *Good Dayes:*

3. **I**T's an ill wind blows no body good.
4. A Wife's a fine thing, but House-keeping's a shrow.
- 5, 6. Two heads are better then one.
- 10, 11. Kisse and be friends.
13. Possession is eleven points in the Law.
14. Still he fisheth that catches one.

#### *Evill Dayes.*

- 1, 2. **Q**uarrelling Curs never want sore Ears.
7. A scolding Wife and a smoky house mars a man's eyes.
8. Fools and conceited men make Lawyers rich.
9. It is not good to wake a sleeping Dog.
12. Fair dayes in January deceive many in February.

# BOOKER. 1653.

15. It's pitty fair weather should doe any harm.
18. Wars are good to talk of, not to try.
19. All will do well, the old man danceth.
20. He hath nothing that is not content.
23. First try fair means before you use foul.
- 24, 25. A man may learn wit every day.
27. High flying Hawks are fit for Princes.

16. After a calm comes a storm.
17. Winters weather and Womans thoughts oft change.
21. He that will meddle with all things, may goe shooe the Goose.
22. 'Tis ill jesting with edge tools.
26. Nothing continues long in one state.
28. It's better be alone, than in ill company.

## MARCH.

### Good Days:

3. IT's an ill Dog's not worth whistling.
5. God send you joy, for sorrow will come fast enough.
8. It is good to fear the worst, the best will save it self.
9. It matters not what men say of us.
- 10, 11. Hold on and be happy.
- 13, 14. He that riseth becometh, hath something in his head.
15. A good man can do no more hurt then a Sheep.
17. Women will be quiet when they be well pleased.
28. The German's wit is in his fingers.
19. One hand washeth another.
- 23, 24. Farewell and say nothing.
26. To every Bird his own Nest is best.
28. Among friends much salt is eaten.

### Evil Days.

1. Other men have their wives as well as you.
2. Save a Thief from the gallows & he'll be the first will rob you.
1. Cist your cap at the Moon.
6. Wedding and ill wintering tames both Man and Beast.
7. A scald mans head is soon broken.
12. Shame take him that shame thinketh.
16. Many words, many blowes; as mad as a March-Hare.
20. Much ado to bring Beggars to the Stocks.
1. The rarest things will fade.
22. 'Tis good sleeping in a whole skin.
25. A fine morning to catch Herings on Dunmore Heath.
27. An old fock needs much clowting.
29. Bat a word and a blow.
30. He that hath but one eye, must take heed how he lose it.
31. Choose neither Women nor Linnen by candle-light.

# A Prognostication.

APRIL.

## Good Dayes.

1. IT is good taking day before us.
5. After rain, fair weather.
7. A Bean in Liberty, is better then a Cornfit in Prison.
9. A black Hen layes white Eggs.
11. The more the merrier.
11. Love locks no Cuphoards.
15. Take kisses for your kindnesse.
16. He that will win a Maid, must see her but now and then.
19. Meare and Mattens hinder no mans journey.
20. Love looks for love again.
26. He danceth well, to whom Fortune pipeth.
27. Home-shooting winneth the Game.
28. He that gives me small gifts would have me live.
29. The Sun is comfortable.

## Evil Dayes.

2. HE loves me as a Cat loves mustard.
3. He's angry, but who knows wherefore?
4. Vice in Vertues habir.
6. A white-liver'd Captain for all his brazen face.
8. They scold like Butter-wives.
10. One ill word asks another.
11. Where Age is faulty, Youth can learn no goodnesse.
12. He putteth Towe and Flax together.
17. No mervail if old men be sick.
18. He that will not have Peace, God gives him War.
21. When Thieves fall out, true men come by their goods.
22. He that's married in haste, shall repent it at leisure.
23. Old and angry.
24. The Law is costly.
25. Wars bring scars. [them.]
30. He hath cast a bone between

MAY.

## Good Dayes.

3. THE Cuckoo thinks her self a fine Bird.
4. Every wind blowes not down Corn.
6. He that hath many pease, may put the more in the pot.
7. He that is my friend grindeth at my Mill.
11. He that is at all Feasts, shall alwayes have thirst.
12. As a man is friended, so the Law is ended.
13. Killing goes by favour.

## Evil Dayes.

1. AS welcome as Water in a Ship.
2. 'Tis as hard to please a knave as a Knight.
5. He that kills a Man when he's drunk, shall be hang'd when he's sober.
8. He must have a long spoon that will eat with the Devil.
- 9, 10. There's more adoe with Jack-an-apes, then with all the Bears. [breaches.]
14. The more Master wears no

C 4

17, 18 The

## BOOKER. 1653.

17, 18. The Priest forgets that  
ever he was Clark.

19, 20. Two good things are bet-  
ter then one.

24, 25. As white as a Lilly.

26, 27. He is where he would be.

15. A May-flood never did good.

16. The Sun, Moon and seven  
stars are against him.

21, 22. Walk knave, walk.

23. A rope for a Parrat.

28. Betwixt Hawk and Buzzard.

29, 30. Hanging ripe.

31. Goe catch Butter-flies.

## JUNE.

### *Good Dayes.*

2, 3. A Good prayer is ma ster o  
another's purse.

5 He comes of the right kind.

7 He will save one.

9, 10 You aime fair.

13 The world is somewhat a-  
mended with him.

16 He means no body harm.

19 One man is better then ano-  
ther.

20 Where are sheep, there is  
wool.

21 Where Bees are, there is  
hony.

23 Better half a loaf, then no  
bread.

24 A fair Bird hath fair feathers.

27, 28 Scratch my breech, and I  
will claw your elbow.

### *Evil Dayes.*

1 IT will not be alwayes hony-  
moon.

4 An old Knave no Babe.

6 You look like the picture of ill  
luck.

8 Love is sweet in the beginning,  
but sower in the end.

11, 12 Ill luck to come at the end  
of a shot, & beginning of a tray

14 Young Wenchs make old  
wrenches.

15 What's worse then ill luck.

17, 18 As fit a pattern, as a rope  
for a Thiet.

22 From little good to stark  
naught.

25, 26 We shall have rain, the  
fleas bite.

29, 30 He spends Michaelmas-  
rent at Midium-ner-moon.

## JULY.

### *Good Dayes.*

1 WIne makes old Wives  
wenches.

3 It makes me scratch where it  
itches not.

4 Schollars are kind-hearted.

5 'Tis merry when Gossips meet.

6 They may laugh that win.

### *Evil Dayes.*

2 HE has made many a white  
hedge black.

7 Too hot to hold.

8 Too hasty to be a Parish Clark.

9 An angry man never wants wo

11 He promisetht like a Merchant  
but payes like a man of War.

10 Fair

## A Prognostication.

- 10 Fair Promises.
- 12 Helter skelter.
- 13 A knot of good fellowes.
- 17 Measure is a merry mean.
- 18 Give a man fortune, and cast him into th' sea.
- 19, 20 He loves Mutton well that dips his bread i'th Wool.
- 23, 25 They be well matcht.
- 28 I hope to see him an honest man.
- 29 As like as like may be.

- 14, 15 Dangerous to strive against a multitude.
- 16 One ill weed mars a whole pos of potage.
- 21, 22, 23 All's alike at the latter day, a bag of Gold and a wisp of Hay.
- 26, 27 As hot as a roste.
- 30 He that provides not, a cloak be ore the rain, may chance to be wet to his cast.
- 31 London-bridge was made for wise men to go over, and fools to go under.

## AUGUST.

### Good Days.

- 1 Every thing is pretty when 'tis new.
- 2 Hold fast while you have it.
- 3 When the Pig is proffered, hold open the Poke.
- 7 Every thing is good in its season
- 8 He hath the sun on his face, and the wind on his back.
- 9 Weak men had need be witty.
- 10 You need no spokes-man.
- 14 Love God, and love me.
- 15 A man cannot be rob'd of his Learning.
- 16 A sound mind in a sound body
- 17 Sweet is the fruit of Labour.
- 19 The remembrance of past sorrow is jo. tull.
- 20 Far from Court, and far from care.
- 23 The better day, the better deed
- 24, 25 He makes all fair weather abroad.

### Evil Days.

- 4 HE finds fault with others, and does worse himself.
- 5 At latter Lammas.
- 6 A ter scolding, a pisse-pot.
- 11 Ha you any work for a Tinker.
- 12 We Apples swim, quoth the Horse-turd.
- 13 There's a thing in it, quoth the fellow, when he drunk the dish-clout.
- 18 Wit whether wilt thou.
- 21 He is horn-mad.
- 22 Had I wist was a fool.
- 26 He looks moodily.
- 27, 28 Take a halter and hang your sel.
- 29 His cake is dough.
- 30 He may be heard when he is not seen.
- 31 Poor and proud ; fie, fie.

## SEPTEMBER.

### Good Days.

- 1, 3 A Fter the sk e lowreth, we shall have fair vweather.

### Evil days.

- 3, 4 A L his dishes are chafing-dishes. 6 Yours

## OCTOBER.

### Good Dayes.

- 1 OLD Wine and old Friends  
be praised every vvhere.
- 7 It is good striking vvwhile the  
8 iron is hot.
- 9 It could never come in a better  
time.  
A vvord to a vvise man is e-  
nough.
- 14 Nowv you have a Charge, look  
to it.
- 15 Silver vvill have a silver sound
- 16, 17 Sweet is the fruit of labor.
- 19 Wink at small faults.
- 21 A merry fellowv, fit for all  
Company.
- 22, 23 Good to have tvvo strings  
to one Bowv.
- 24 Kind natures vvvin most.
- 27 He gets the Cause vvhen none  
reel es.
- 30 Win it, and vvear it.

### Evil Dayes.

- 23 HE that's angry vvithout a  
cause, must be pleased  
vvithout amends.
- 4 A shrevvd ansvver is alvvayes  
ready.
- 5 Women must have their vvords
- 6 No fool to the old fool.
- 10 He takes pepper in the nose.
- 11 Craft brings nothing home.
- 12 His heart is in his heels.
- 13 Fling the Dog a bone.
- 18 He's undone like an Oyfter.
- 20 An old Cingue-Cater.
- 25, 26 Suits in Lavv, and oft ta-  
king of Phyllick, undoes many.
- 28, 29 Any thing for a quiet life.
- 31 Tis a hard vvinter vvhen one  
Wolf eats another.

## NOVEM-

## A Prognostication.

### NOVEMBER.

#### Good Dayes.

- 3 Fair vvords.  
4, 5 There's difference be-  
twixt Chalk and Cheese.  
6 Hear and see, and say the best.  
7 Much shall have more.  
11 Every man hath his delight.  
12 He is a friend at a dead life.  
13, 14 A fair face must have good  
conditions.  
15 A vvilling heart performs its  
part.  
19 More cost, more vvorship.  
20, 21 It is good to be doing som-  
thing.  
24 Better sit still, then rise and  
fall.  
25, 26 A small Pack becomes a  
little Pedlar.  
30 Something hath some favour.

#### Evil Dayes.

- 1 ONE mischief in the neck of  
another.  
2 Neither fair nor faithfull.  
8 Hail brings frost i'th tail.  
9 He is gotten out of the mire, and  
fallen into the River.  
10 He playeth on both hands.  
16 It is no medling vvith short  
Daggers.  
17 He had need be strong that  
lives among Wolves.  
18 He mars a good matter.  
22 The Lavv is in his ovvn hands.  
23 Harm vvatch, harm catch.  
27 A man must fear a vvoman and  
thunder.  
28 The Pen of the Lavvyer is the  
svword of Revenge.  
29 He that hath no mony, needs  
no purse.

### DECEMBER.

#### Good Dayes.

- 2 Consult vvith your Pillow.  
3, 4 A peny at a pinch is  
vvorth a pound.  
8 'Tis good going a foot, vvhen a  
man hath a Horse in his hand.  
11, 12 Speak and speed, ask and  
have.  
13 Faint Heart never vvon fair  
Lady.  
15 Every man as he likes, quoth  
the good man vvhen he kist his  
Covv.  
18 Speak to the purpose, or hold  
your peace.  
19 Mind your Businesse.

#### Evil Dayes.

- 1 A Dogs nose is ever a cold.  
5 Too fond, or too frowvard.  
6 A young serving-man, an old  
Beggar.  
7 Fiddle, saddle, tell me it snows.  
10 Kim, kam; arlie, vertie.  
14 Fire quoth the Fox, vvhen he  
pist on the ice.  
17 He is vvise that can keep him-  
self vvarm.  
20 'Tis not good to be alvvayes  
on the Dagger-head.  
21 He's a dangero's Fellow.  
24 Out of harms, out of Gunshot.  
25 As honest a man as any's in  
the

22 Drive the nail to the head.  
23 You are in the vway of preferment.  
29,30 Look about you.  
31 Long lookt for, comes at last.

the Cards, vwhen the Kings be our.  
26 Crosse Carding.  
27 H. 's put to his trumps.  
28 Next vway round about, in at the far door.

*Joco-Seria.*

*Omne tulit punctum, qui miscuit utile dulci.*

Who Pleasure joyns with Profit, gets the day;  
He wins the Priz, and bears the Bell away.

*Of the SPRING.*

**T**He ☉ entreteth the first scruple of the Cardinal *Aequinoctial* Sign *Υ*, upon Thursday the tenth day of *March*, at two of the clock, three minutes, and nine seconds in the morning, making then the day and the night of equall length throughout the *World* (under the Poles excepted :) At which time the beginning of *Μ* doth culminate, the end of *♂* being horoscopicall; the *♃*, who is the earths Planet, and the conveyer of the Planets influxes thereupon, being separating from the body of *♂*, in exact *♌* with the *Scorpius* *tears*, upon the cusp of the twelfth house; as also, having lately been in *Δ* of the ☉, and *□* of ♀, who likewise looks upon *♂* with *♌*, and the *♃* applying to the *Δ* of *♂*, \* of *♃*, and *□* of ♀; as also, the ☉ being in an exact *Δ* to *♌*, and the notable *♌* of *♂* and *♃* lately preceding on the 16. of *February*, are strong arguments of great mutations and vicissitudes among all Sublunaries, producing effects of contrary and opposite qualifications, which the acutest *Lynx* or naturall foresight cannot exactly pry into: However, what may be observed upon this position from ancient and modern Experience, it will not be amisse in some measure to discover.

*Mars* is principall Lord and ruler of this Quarter, and consequently of the whole Yeer, and being thus located, he foreshews a fruitfull and plentifull yeer, yet many times Thunder and Lightnings, with impetuous Tempests and Showrs of Rain; but by reason of his Septentrionall Latitude and Orientality, and in so excellent Radiation with

## A Prognostication.

with the ☉, it is very probable all will tend to a benevolent, salubrious and pleasant Constitution of Weather: and however, there may be *inter multos, dimicationes, & dissidationes*; yet the conclusion will be in peace, security and tranquility. And although it be a true and certain Aphorism, that *significationes litium, & bellorum, que ut plurimum a Marte pendunt, sed quia receptus, & in bono aspectu Solis, &c. qui sunt lites, et extinguunt eas*: yet by reason of the double ☿ of ♄ and ♀ this year, once in February, and again in July, (both which according to Astronomical Calculation from the best Tables, are noted upon their proper dayes, as may be observed in the *Ephemeris* or *Almanack*) much quarrelling, strife and contention may be shrewdly suspected to happen in divers Regions, Countries and Cities, &c. subordinate to ♄ and ♀, and their Triplicities; together with those that are in ☐ and ♀ thereunto, but chiefly in Italy, Bohemia, Sicily, Muscovia, Tartary, Denmark, Westphalia, &c. Of Cities, Rome, Prague, Ulm, Hamborough, and many other places; which who that list to observe, shall find them heretofore mentioned by me and others: and no doubt our Merchants, Traffiquers and Correspondents in those places, will in due time inform us of. I shall not take care to reply to the railings of our late *Astrologomastiges*, let them erect their eyes to Heaven, and observe the grand Configurations the Planets have to one another this year, especially in January, February, April, May, July, November, December, yea, and in every moneth, the one preparing, the other producing great *Catastrophes* and mutations in divers places, yea, all Christendom, and not improbable amongst the *Turks, Infidels* and *Heathens*: I could wish Noah's Dove might appear with glad tidings of Peace, after these late, long and terrible Wars, which for any man can tell, are like yet to continue for some yeers, and be Universall.

But since the Coelestiall Configurations, together with many and great Eclipses of the *Luminaries* have been, and others within few yeers to come, are like still to be the *Prodromi*, and fore-runners of wonderfull Changes to happen in this world: and for that the ignorant are still as malicious and incredulous as heretofore, and are likely to persist in their errors, I shall desist in making further Observations at this time: *When God will punish, he first takes away the Understanding; he that knows nothing, doubts nothing; he that believes all, misseeth; he that believes nothing, hits not: and he that will remove stones may bruise his fingers.* Tunc tua res agitur, paries cum proximus ardet. *Beware thine own, when thou dost see thy Neighbours house in flames to be.*

I may be blamed as the Carrier was that brought ill News to the Town: we shall all doe very well, if in keeping our selves from the too high curiosity and superstition, which misguideth the *Sciolists* and many other Ignorants, in these studies of such sublimity; we moderate

moderate our selves in the contemplation of God by his Works, especially the heavenly Bodyes; for so shall we become good *Astronomers*, and *Christian Astrologers*: it, I say, contemplating the Heavens and all the Ornament of them, we propose them unto us, as the Universal Preachers of the glory of the Sovereign, and consider them as the high work of his Hands, as the royall *Psalmist* doth exhort us, *Psalm. 8. and Psalm. 19. &c.* and so by the creation of the *Sun, Moon, Stars* and *Planets*, we shall learn to meditate what Light there is in him, who dwelleth in the inaccessible Brightnesse, and which is the Father and Fountain of all Lightes; as also, what good we are to hope for of him: for by that good which the corporall Light bringeth unto us for our bodyes, and the *Sun, Moon, Planets* and *Stars* for the life of Man, we may in some sort judge what Felicity is prepared by the Divine and spiritmall Light for our souls, and by God our Creator, in whom it abideth: by which means, though God hath set them for Signs and seasons, &c. we shall be armed against their manifold, and sometimes dire aspects, positions and configurations which often happen, and experience can plentifully witnesse.

*Astra regunt fatuos, Sapiens dominabitur Astris;  
Est Deus in Cœlis, hunc cole, tuus eris.*

## Of the SUMMER.

Summer takes beginning upon Saturday the eleventh day of June, at five a clock, ten minutes, &c. seconds in the morning; the *Sun* then entering *Scorpio*, at which time the seventeenth degree of *Scorpio* ascendeth, the *Dispositor* thereof in her exaltation, separating from a  $\star$  of  $\odot$ , and applieth to a  $\square$  of  $\text{h}$  and  $\text{v}$ , and  $\text{p}$  or  $\text{g}$ ; foretelling to happen to the common People, by the irregular and harsh countenances of the *Saturnine*, *Jovian* and *Martianists*, some afflictions to them, for and concerning Taxes, Impositions, Burdens, and matters of Religion, to be imposed upon them: who these Persons are, have been formerly mentioned in other places; but the *Dispositor* being so well posited, will find a friend of the  $\odot$ , that is, Persons in Authority, &c. and  $\text{g}$  who irradiates the ascendant with an amicable aspect, and very potently, causing the Commons to smile to see them at such odds amongst themselves; for there is a planick  $\text{p}$  of  $\text{h}$  and  $\text{v}$ , and the like  $\square$  of  $\text{h}$  and  $\text{g}$ , and a partill  $\square$  of  $\text{v}$  and  $\text{g}$ . After fair weather we shall have rain, and after rain fair weather again. *Diem, Aquam, Solem, Lunam, Noctem, hæc Argento non emes.*

## A Prognostication.

### Of the HARVEST, or AUTUMN.

Autumn begins upon Monday the 12. of September, at eight of the clock, eight minutes, 3. seconds at night, the ☉ then entering ♊, the third degree of ♊ horoscopically, and the Bulls yearling, ♉ culminates, and ☿ is in the west angle; the ♀ separates from the ☿ of ♋, to a ☿ of ♋, ☿ of ♋, ☿ of ♋, and ☿ of ♋: He is poor that can promise nothing, but saying and doing are two mens offices; However, it is to be hoped all will do well: for the inition being so friendly, it may be wondred at if the conclusion should not be kindly: I dare be bold to say, we shall have store of wholsome and fresh gales of wind, sufficient to winnow a full Garner of Corn; *Fac interim aliquid ipse, deinde Deum invoca et benedicidi.* In this Quarter November the 17. is a ☿ of ♋ and ☿ in 12. gr. 33; I much suspect it: for as Hylfayes, *Accident morbi populares et mortalitates, erunt bestie magni valoris, et diversi colores apparebunt in aere.* Which in plain English is, That popular (or epidemical) Diseases and mortalities shall happen, Beasts shall be (dear or) of great price, and divers coloured (or discoloured) Clouds shall appear in the Ayre. Whatever others construe or conjecture to the contrary.

### Of WINTER.

Winter takes beginning upon Sunday the eleventh day of December, at seven a clock, 36. minutes, 33. seconds in the morning, the ☉ then entering ♏: At this time the ♀ is copulated with ♏, who is Lord of the seventh and ninth houses, ♋ and ♏ accompany together very gloriously in the West: *Jovis omnia plena, nihil deest avibus, pecora in diem vivunt, seris in alimentum solitum sufficit.*

### Of ECLIPSES.

Four times shall the Inhabitants of the Earth behold the *Luminaries* eclipsed this yeer, twice the ☉, and as oft the ☾; but we in England, as also France, Spain, Scotland, Ireland, Island, &c. shall not see any of them, except one, and that totall of the ☾; which will happen on Friday the fourth of March, it will begin at one of the clock, 48. minutes past, in the morning; the beginning will be one minute before three of the clock, the greatest obscurity at 53. minutes past three a clock, the end of that darknesse at 7. minutes past four; and at 57. minutes past five of the clock the Moon will have fully recovered her borrowed light: the digits eclipsed are almost 19. of 24. the whole duration will be four hours, nine minutes.

The

## BOOKER. 1653.

The colour of the Eclipse at the greatest darknesse, will be mostly black, with a greenish ash-colour, and some ruddinesse; it happens in the 22. degree of  $\text{M}$ : the effects begin to operate about the 26. of October next, and continue in force to the second of March 1651. but the greatest influence thereof will be about *Christide*, or the end of this year 1653. I should have spoken somewhat thereof, and do know some Persons whom it nee ly concerns, but being confined to this narrow scantling of paper, I am enforced to passe it by at present: *We shall know how the Marke goes by the Marke-folks.* The other Eclipses not being visible with us, but in remote places, I refer you to others for their Observations.

*Sic seculi finem, pro tempore terminus esto.*

From my house in Cree-Church lane near  
*Agate, London, Augusti ultimo, 1652.*

John Booker.

Mathematicall Instruments either for Sea or Land, are made by *Walter Hayes* at the Crosse Daggers in Moor-fields, *Anthony Tompson* in Hofter-lane, and *Thomas Brown* in the Minories.

Books lately Printed.

*Scintillula Altaris*, or A Reflection on Primitive Devotion, as to the Feasts and Fasts, as to the Church orthodoxally revived, sold by *Rich. Marriot* in S. Dunstons Church-yard, Fleet street.

Chyromancy, Physiognomy, and of the Moles of Mans Body, sold by *Nat. Brooks* at the Angel in Cornhill, written by *Richard Sanders*.

*Posthuma Fosteri*, or The Description of a Ruler, and the use thereof in Astronomy, Navigation and Dialling. An Introduction to Merchants Accompts. A book of Interest money, at 6. per cent. Popular Errours in matters of Ph. sick, to be sold by *Nicho. Brown* at the south entrance of the Royall Exchange.

Two Discourses of God and his Providence, of Christ his Miracles and Doctrine, by *Hugo Grotius*, sold by *William Lee* at the Turks head in Fleet-street. Artificiall Arithmetick by *Robert Jager*, sold by *Humphry Moseley* at the Princes Arms in Pauls Church-yard.

*Pueriles Consabulationunculae*, and *Cortezii Colloquia*, in Latine and English, by *Ch. Hoole*; by the help whereof young Schollars may readily attain to the Latine Tongue: to be sold by the Company of Stationers.

New and excellent Globes, Coelestiall and Terrestriall, of a middle size, between 14. and 15. inches diameter, more true and exact then any yet published, as also the use of the Globes, especially concerning Dialling; sold by *Joseph Moxon* and *John Sugar*, at their Shop in Cornhill by St Michaels Church, at the signe of *Aslas* upon Mount *Parnassus*. Mathematicall Recreations augmented and revised, wherunto is added the description and use of the double Horizontall Diall, by *William Oughtred*, sold by *William Leake* at the Crowne in Fleet-street.
